### **Phase II Activation of the Heat Contingency Plan**

Phase II of the Heat Contingency Plan is activated as of Friday, 09/01/17 due to forecasts of dangerous and excessive heat.

A State Agency Partner and Stakeholder conference call was conducted on 09/01/17 to provide a briefing on the heat event which continues to impact most of the state according to National Weather Service.

Per the National Weather Service (NWS):

- An Excessive Heat Warning has been extended through Monday over much of the State.
- In addition to the Excessive Heat Warnings precipitation from Tropical Storm Lidia will impact Southern California on 09/03/17 and then will move into Northern California early next week.
- Heat stress possible for livestock with limited relief from the heat overnight.
- Area waterways are running very cold and fast, increasing risk for hypothermia and water rescues.
- Phase II actions of the California Heat Contingency Plan will be reassessed on Monday, 09/04/17.
- San Francisco Department of Emergency Management has activated their EOC in support of Heat Medical Surge activities. A Cal OES Coastal Region ESC responded to the EOC.
- Please see attached Heat Brief.
- Cal OES has created a page listing Summer Heat Resources including a map of cooling centers around the state, see link below.

<http://www.caloes.ca.gov/ICESite/Pages/Summer-Heat-Resources.aspx>

# **SITUATION SUMMARY**

## **Cal ISO**

- Per the ISO Emergency Response Coordinator (ERC), ISO does not anticipate having any issues meeting demand during the heat event.
- Consumers are urged to conserve electricity especially during the afternoon when air conditioners typically are at peak use. Consumers can help avoid power interruptions by turning off all unnecessary lights, using major appliances before 1300 hours and after 2200 hours, and setting air conditioners to 78 degrees or higher.
- Persistent hot temperatures and tight supply can strain the power grid, as air conditioner use increases.

# **WEATHER SYNOPSIS BY REGION**

## **NORTHERN CALIFORNIA**

Isolated thunderstorms today then scattered thunderstorms Saturday through the middle of next week  
Gusty northeast to east winds across Southern California through Sunday morning  
Very hot through Saturday

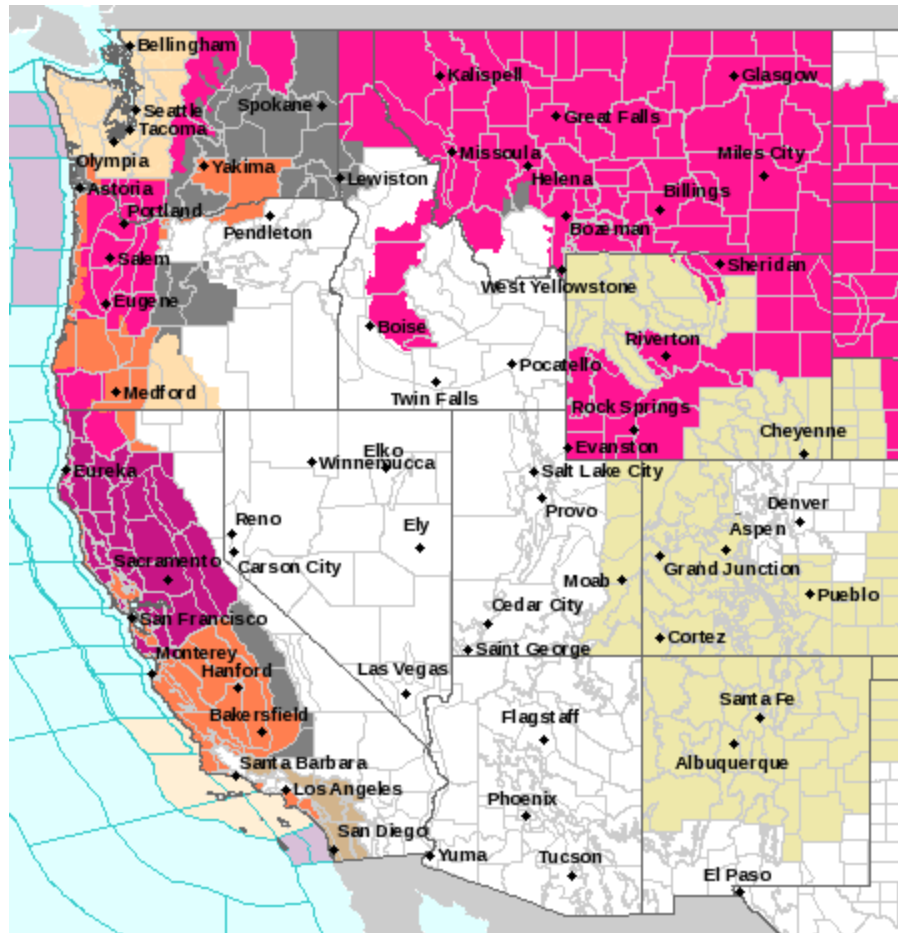

A strong ridge of high pressure will build into Northern California from the Pacific Ocean causing moisture to decrease and only allowing for isolated shower and thunderstorm activity across the region through Saturday morning. Today will be the warmest day of this current heat wave, with upper 80s and 90s across the mountains and between 105 and 115 in the valleys. Minimum humidity will be mainly in the teens today. The strong ridge of high pressure will move to the Great Basin on Saturday and remain parked there through the middle of next week while an area of low pressure forms off the Southern California Coast. Moisture will increase due to the remnants of Tropical Storm Lidia and cause scattered showers and thunderstorms across the Sierra and all of Southern California Saturday afternoon through the middle of next week. The rest of Central California will also receive scattered showers and thunderstorms starting Sunday. Most of the region will continue to see minimum humidity in the teens Saturday, but there will be a big jump in humidity across Southern California south and east of Los Angeles County. The entire region will have high humidity Sunday through the middle of next week. Significant cooling will start Sunday, with near normal temperatures Monday through the middle of next week. There will be northeast to east winds of 15 to 25 mph with gusts to 40 mph over the mountains and below the canyons and passes of Southern California through Sunday morning. Across San Diego County, there will be easterly winds of 20 to 30 mph with gusts to 50 mph Saturday morning through Sunday morning.
